¹Center for Quantitative Genetics and Genomics, Department of Molecular Biology and Genetics, Aarhus University (DK)

²Department of Animal Science/Epidemiology & Biostatistics, Michigan State University (USA)

- Genomic models have their likelihood misspecified to that of the true model that generates a phenotype.
- Misspecification: SNP-derived covariance structure, instead of QTL-derived.

²Department of Animal Science/Epidemiology & Biostatistics, Michigan State University (USA)

- Genomic models have their likelihood misspecified to that of the true model that generates a phenotype.
- Misspecification: SNP-derived covariance structure, instead of QTL-derived.
- Representation of covariance structure of the data may be incorrect.

²Department of Animal Science/Epidemiology & Biostatistics, Michigan State University (USA)

- Genomic models have their likelihood misspecified to that of the true model that generates a phenotype.
- Misspecification: SNP-derived covariance structure, instead of QTL-derived.
- Representation of covariance structure of the data may be incorrect.
- This may lead to wrong inferences about variance parameters.
